

INVESTOR OVERVIEW

Living microgreens, grown in Madrid.

Precision hydroponics · Live, made-to-order harvest · Zero food miles

OCTOBER 2026

WHO WE ARE

We grow like artisans. We operate like a company.

Rootflow Hydroponics was founded in Madrid in 2026 with a simple idea: to bring professional kitchens living microgreens at their peak, hours after harvest.

We grow with precision LED hydroponics and harvest only to order, for distributors, wholesalers, and foodservice. No inventory, no waste, always made to order.

THE MARKET

A young category **growing double digits***.

Microgreens are no longer a fine-dining curiosity: it's a ~\$3B global category set to double this decade — and Europe leads the market.

— HEALTH

Microgreens pack up to 40× more nutrients than their mature counterparts.

— PROXIMITY

Consumers and chefs reward local, fresh, sustainable produce — the heart of zero food miles.

— TECHNOLOGY

Indoor vertical farming is the fastest-growing format in the category (12.5% per year).

THE SECTOR IS ALREADY FUNDED

Tierra raises €400,000 with ENISA.

Tierra is the closest direct comparable to Rootflow: microgreens and precision agriculture in Madrid, with proprietary crop-control software. It just closed a €400,000 round backed by ENISA, Spain's state innovation lender.

The funds go to expanding capacity, developing two patents, and advancing its software. Their case confirms ENISA funds exactly this profile of company — in our market, right now.

Rootflow competes with its own edges: a custom ERP already in production, a zero-inventory model that's hard to replicate, and direct sales to high-margin foodservice.

WHO WE ARE

Three founders, **three fronts covered.**

Pedro Domecq Vergara

Nicolás Bustamante Thams

Domingo de Guzmán Greus

ADMINISTRATION & FINANCE

BBA (ICADE)

Background in strategy consulting and M&A. Leads finance, administration, and corporate structure.

SALES & HOSPITALITY

BBA (Richmond University)

Background in foodservice business development. Manages restaurant and distributor relationships and market entry.

PRODUCTION & AGRONOMY

Agricultural Engineer (UPM)

Trained in AI- and Arduino-based greenhouse automation. Leads cultivation, variety R&D, and production operations.

WHAT WE DO

A few grams. Huge value.

Ultra-fresh microgreens and edible flowers, harvested at their exact peak of flavor, aroma, and color. Low weight, extremely high value: a few grams transform a dish — and the perception of an entire menu.

14 + 5 varieties in production, with five more in development

5–100 g any portion: live tray, bulk, or single-serve

6–10 days of shelf life by variety, thanks to live harvest

WHY ROOTFLOW

Gourmet produce, **close to home,** no shortcuts.

I — ORIGIN

True zero-mile

Grown and delivered in Madrid. A freshness imported or long-haul produce simply can't match.

III — PROXIMITY

Direct source

Deal directly with the grower: instant response, transparency, and real control over sourcing.

II — SCALE

Agile structure

Fast decisions and made-to-order production: the agility of a small, specialized team.

IV — HARVEST

Live harvest

The product arrives alive and keeps growing. Aroma, color, and texture intact until plating.

VARIETIES IN PRODUCTION

14 varieties. And whatever the market wants.

01 Cilantro · *Coriandrum sativum*

02 Fennel · *Foeniculum vulgare*

03 Red Radish · *Raphanus sativus*

04 Pea · *Pisum sativum*

05 Yellow Beet · *Beta vulgaris*

06 Genovese Basil · *Ocimum basilicum*

07 Chinese Chives · *Allium tuberosum*

08 Daikon Radish · *Raphanus sativus*

09 Purple Basil · *Ocimum basilicum*

10 Red Beet · *Beta vulgaris*

11 Barbra Onion · *Allium cepa*

12 Red Giant Mustard · *Brassica juncea*

13 Pink Radish · *Raphanus sativus*

14 Red Amaranth · *Amaranthus tricolor*

+5 in development for a co-developed micro-mix · the range grows with every client.

HOW WE DO IT

Live harvest, zero inventory.

Made to order

We cut when you order. We produce exactly what will be consumed: zero inventory, zero waste, maximum freshness.

LED hydroponics

Soil-free, pesticide-free cultivation in controlled conditions. Same quality and size, 52 weeks a year.

Total flexibility

From 5 to 100 g; live tray, bulk, or single-serve. Format, cut point, and blends tailored to each client.

Private label

Your label on our product. The distributor brings the brand; we bring the quality and consistency.

HOW WE PRODUCE

From order to plate, in six steps.

01 Order

The client sets variety, format, and date. We produce against real demand, not forecasts.

02 Sowing

Tray by tray, on clean substrate at a density calibrated per variety.

03 Blackout

Germination in blackout (3–7 days) for a uniform, vigorous sprout.

04 Light

Growth under LED, with controlled irrigation and climate (2–13 days by variety).

05 Harvest

Live-cut at the perfect point — or delivered as a living tray, uncut.

06 Delivery

Within 24–48 h in Madrid, custom-labeled and traceable by batch.

The entire cycle is logged in our ERP: every tray is traceable from seed to delivery.

PRODUCTION & CAPACITY

We know what we produce, down to the gram.

Every variety has its cycle — blackout germination and growth under light — and a per-tray yield we measure and log. That discipline lets us commit to volumes and dates with full reliability.

VARIETY	CYCLE (BLACKOUT + LIGHT)	ROTATION	YIELD
Radish · short cycle	3 + 3 days	10 cycles/mo	245 g / tray
Cilantro · medium cycle	5 + 10 days	3 cycles/mo	145 g / tray
Basil · long cycle	5 + 13 days	2.3 cycles/mo	90 g / tray

Estimate based on 96 trays under light simultaneously (3 towers, 14.4 m² of growing surface) · planned variety mix · yields measured in production.

Current capacity: ~120 kg/mo with a commercial variety mix · peak of ~240 kg/mo in short-cycle monoculture

PROPRIETARY SYSTEM

A custom ERP, built from scratch.

We didn't adapt off-the-shelf software: we built our own ERP. Orders, production, traceability, and invoicing live in a single system designed around how we work. And the next step is already mapped: once the facility adds climate and irrigation sensors, that data will flow straight into the system.

-  Orders, clients, and invoicing in a single flow
-  Production planning and batch-level traceability
-  Estimated stock and real yield by variety
-  Ready to connect the facility's sensors

WHERE WE ARE TODAY

Small, but already earning.

We operate from a 58 m² space in Madrid with three growing towers in continuous production. A compact, efficient base already generating recurring revenue.

58 m²

CURRENT SPACE

3

TOWERS RUNNING

2

PAYING CLIENTS

ACTIVE CLIENTS

Two distributors with recurring weekly orders, one of them with a consignment deal underway at Mercamadrid, Madrid's wholesale market.

ALREADY CO-DEVELOPING

Exclusive micro-mix

An exclusive blend for one of our distributors, adding 5 new varieties to the range.

Co-development isn't a promise: we're already doing it.

THE PATH

From idea to group, in six milestones.

The know-how is already in hand: product, clients, ERP, and operations proven before raising a single dollar.

WHERE WE'RE HEADED

The leap: from 58 m² to a 350 m² facility.

In 3–6 months we move production to a 350 m² facility in southern Madrid. Three large-format racks add 2,880 light positions and take growing surface from 14.4 m² to 432 m².

Growing capacity multiplies by 30. At full run-rate, the plan projects ~3,100 kg per month: enough volume to serve distribution at scale and supply restaurants in our hot zones, while keeping the live, made-to-order model.

Growth funded by the round plus a working-capital line; the facility is leased to avoid tying up capital.

WHAT WE'RE RAISING

We're raising €100,000 to make the leap.

CAPITAL STACK

PRIVATE INVESTOR · equity, 10%	€100,000
ENISA AGROINNPULSO · loan in process	€100,000

TOTAL RAISED

€200,000

Covers the plan's €173,048 need · 1.16× coverage

INVESTOR RETURN · BASE CASE

51%

ANNUAL IRR

5.2×

MOIC

Year 4

EXIT HORIZON

TERMS · INVESTOR TRANCHE

Equity investment: 10% of the company for €100,000 · exit right agreed from year 4 · 1.5× downside floor on the amount invested · no personal guarantee · founders keep 90% and control.

Why equity: ENISA requires equity at least equal to its loan, so the private tranche comes in as equity to meet it. Every investor euro unlocks a matching public euro.

WHERE IT GOES · €173,048

■ €64,800	Facility, racks and equipment	■ €65,008	Ramp-up buffer (4 months)	■ €24,440	Licenses, legal and contingency	■ €18,800	Automation, microhub and deposits
-----------	-------------------------------	-----------	---------------------------	-----------	---------------------------------	-----------	-----------------------------------

Safety margin: €30,000 minimum cash, 15.9× minimum DSCR (years 2–7), and working capital on a credit line — not the round.

FINANCIAL PROJECTION

From ramp-up to full run-rate.

Year 1 runs at a loss (–€30K EBITDA): the facility is filling and the team arrives before the revenue does. From there, revenue climbs client by client — distribution and restaurants — to full run-rate: ~€1.72M and a 42% EBITDA margin.

Base case from financial model V17 · full run-rate in year 5: facility full, 123 restaurants, team of 9 · figures ex-VAT, subject to year-end close.

Operating leverage: the levers — minutes per tray, pricing, cost and restaurant share — drive run-rate EBITDA margin from 27% (conservative) to 53% (optimistic).

RANGE OF OUTCOMES

From base case to full potential.

One model, three cases.

Base is the business plan. Changing a single lever — minutes per tray, price, automation or restaurant share — recomputes headcount, EBITDA, cash, and the investor's return.

CONSERVATIVE		BASE		OPTIMISTIC	
28.2%		50.7%		66.6%	
INVESTOR IRR		INVESTOR IRR		INVESTOR IRR	
2.70×	€2.70M	5.16×	€5.16M	7.70×	€7.70M
MOIC	EQUITY VALUE · EXIT	MOIC	EQUITY VALUE · EXIT	MOIC	EQUITY VALUE · EXIT
€1.45M	€389K · 27%	€1.72M	€714K · 42%	€1.98M	€1.05M · 53%
REVENUE · RUN-RATE	EBITDA · RUN-RATE	REVENUE · RUN-RATE	EBITDA · RUN-RATE	REVENUE · RUN-RATE	EBITDA · RUN-RATE

WHAT CHANGES IN EACH CASE

Minutes per tray	4	3	2
Selling price (index)	90%	100%	110%
Product cost (index)	105%	100%	90%
Automation CAPEX	€0	€10,000	€35,000
Headcount at run-rate	11 people	9 people	7 people

Downside floor: guarantees the investor at least 1.5× — €150,000 on €100,000 invested — even if the plan falls short. Under the current plan it is not triggered in any of the three cases.

HOW MARGIN GROWS

Four levers for growth.

I — COST

Automation

Climate and irrigation sensing and control cut labor cost — the largest line in vertical farming — and raise output per m².

III — MARGIN

Premium mix

More restaurants, edible flowers and high-value-per-kilo varieties: raises revenue per tray without raising production cost.

II — PRICE

Pricing

Today we sell at the low end of the market. As the brand and chef relationships mature, there's room to move toward premium pricing.

IV — SCALE

New lines

Each additional rack scales over a fixed cost base. The same foundation supports new lines and business areas.

WHY EQUITY

We take equity because ENISA requires it.

I — THE REQUIREMENT

Equity $\geq$ loan

ENISA requires the company's equity to be at least equal to the loan. A private loan is debt and doesn't count: to unlock the €100,000 public loan, the private tranche has to be equity.

II — THE PROTECTION

1.5× floor

The investor receives the greater of two amounts: their 10% of the company's value, or 1.5× their investment. They earn a return even in the conservative case.

III — THE LIQUIDITY

Exit from year 4

No dividends until ENISA is repaid. The return comes from an exit right agreed upfront, not from a coupon.

IV — THE CONTROL

Founders keep 90%

A minority stake with no veto over day-to-day operations; the founding team continues to run the business.

WHAT THE INVESTOR RECEIVES AT EXIT · ON €100,000

Instrumentation: a convertible note, converted into equity before ENISA formalizes its loan, as its procedure requires.

BEYOND MICROGREENS

Rootflow is the first OpCo. **Not the last.**

HOLDING · strategy, capital and acquisitions · one OpCo per project

OPCO 1 · TODAY

Rootflow

Live microgreens for restaurants and distributors: low capital, skin in the game and recurring cash.

Already in the plan: a microhub in Salamanca, Chamberí and the center, with riders for the last mile.

LEG 2 · GROWERS

Seeds and Seed Mats

Specialty seed distribution: a new revenue line and direct buying of our main input cost.

Biodegradable Seed Mats with pre-spaced seed, plus seeding machines, for farms (B2B) and retail kits via e-commerce.

LEG 3 · NUTRITION

Microgreen powder

Surplus and trim, dehydrated or freeze-dried into a branded supplement — think AG1, built on microgreens.

Long shelf life, no cold-chain pressure and its own direct-to-consumer channel.

LEG N · INORGANIC

New OpCos

Acquisitions in the legs we already run, or in new ones.

One OpCo per project under the holding: ring-fenced risk and tailored financing.

Synergies: every leg shares growing know-how, ERP, clients and brand. Seed cuts our cost; powder turns trim into margin.

Core first: each new leg opens once there's cash flow, in its own OpCo — without distracting from Rootflow.

LET'S CONNECT

Let's talk.

We'd love to show you the farm in Madrid and explore how you might join this project.
